Vaccinating against tumors, infectionsing immunostimulatory Py-rich and

infectious diseases, allergies and rich and TG nucleic acids.

asthma

The invention relates to inhibiting angiogenesis in a subject, comprising administering at least one antiangiogenic nucleic acid molecule. Also included is a kit comprising a first container housing the antiangiogenic nucleic acids, and instructions for administering them to a subject

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of treating or preventing allergy or asthma which comprises administering to a subject a poly-G nucleic acid in an aerosol formulation. The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represent an immunostimulatory nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bratzler RL,

The methods and compositions of the present invention are useful for the treatment or prevention of asthma and allergy, including rhinitis, urticaria and atopic dermatitis, using an immunostimulatory nucleic acid alone or in combination with other medicaments. They can also be used in preventing bacterial and viral infections. This sequence represents an oligonucleotide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            daapted a non-toxic alerting response to their release from bacteria. The circumstant also relates to a method for the preparation of the bacterial of the by subjecting bacteria to one or more periods of stress, separating the ORNs and media from the bacteria, and filtering the separated product to remove substances with a molecular weight of more that 10 kD; and a comethod of using the filtrate to modulate/stimulate the immune system of animal to withstand microbial infection. The composition and methods of the invention are useful for modulating and/or stimulating the immune consistent of animals (including humans, poultry and livestock), particularly to withstand microbial infections or the onset of endotoxic shock. The compositions may be administered orally (e.g., as a food supplement) or compositions may be administered as an adjuvant for oral or compositions may also be administered as an adjuvant for oral or compositions may additionally be used to extend the viability of monocytes, thereby improving their composition contains on the onset of endotoxic abook. The composition and may be used to destroying normal T-cells in people with HIV infections. The composition of the invention contains or or fight infections. The composition of the invention contains or or such that in factions and may be used to contain the invention contains or or such that in people with HIV infections. The composition of the invention contains or or such that in people with HIV infections. The composition contains or or such that in people with HIV infections or pathogenic containing them are non-toxic. The present sequence compositions are people with HIV infections. The compositions becomes the manual compositions because of the invention contains or or such contains or pathogenic containing them are non-toxic. The present sequence compositions the manual compositions contains or pathogenic contains or pathogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition for modulating and/or stimulating the immune system of an animal, comprising bacterial oligoribonucleotides (ORN) with a molecular weight of less than 10 kD. The bacterial ORNs are preferably ADW79934-ADW79936, contain CpG motifs and are resistant to RNase. Bacteria produce RNAse-resistant CpG ORNs in response to stresses such as a change in environment, including the neutral pH they encounter when they colonize animals. The immune systems of animals have co-evolved to recognize such CpG ORNs as being derived from bacteria, and has
                                                                                                                                                      Toxic effect; gene expression profile; renal toxicity; toxicity marker; database; drug screening; toxicity assay; rat; ds.

                                                                                                                                                                            The invention relates to a novel method of predicting at least one toxic conference of a compound. The method comprises a gene expression profile of a compound, and comparing the gene conference or cell sample exposed to the compound, and comparing the gene conference or cell sample exposed to the compound, and comparing the gene conformation profile to a database compound, and townering the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the renal conformation of a toxic effect of a compound, predicting the renal conformation of a toxic effect of a predicting the renal conformation of a toxic effect of a compound, predicting the renal conformation of a toxic effect of a compound, predicting the renal conformation of a toxic effect of a compound, predicting the renal conformation or and toxic. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polymucleotide physiological states, or disease progression. This polymucleotide compounds are the specification. NOTE: The sequence data for this patent conformation format directly from the World Intellectual Property

cc tachycardia, myocardial ischemia, angina, hypertension, hypotension, cc tachycardia, myocardial ischemia, angina, hypertension, hypotension, cc dyspnea, cardiogenic shock or other specific heart pathologies. The cc invention is based on the elucidation of globbal changes in gene cc expression in tissues or cells exposed to known toxins, particularly cc markers) that are differentially expressed on toxin exposure. The cc invention also relates to methods for predicting the progression of a cc compound's toxic effects, for predicting the cardiotoxicity of a cc compound, for identifying an agent that modulates the onset or cc progression of a toxic response, and for predicting which cellular progression of a toxic response, and for predicting which cellular cc progression of a teast two hybridization probes specific for toxicity prediction genes, and solid supports and kits comprising the concity predicting the toxic effects (especially cardiotoxic effects) of compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxic effects) of compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxicity marker sequences of rat origin whose expression is altered on exposure to polynucleotides of rat origin whose expression is altered on exposure to form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic compounds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of a compound by obtaining a gene expression profile of a tissue or cell sample exposed to the compound and comparing the gene expression profile to a database of toxicity prediction genes which are differentially expressed on exposure to known toxins. The tissue or cell sample is preferably derived from heart tissue, and the predicted toxic effect is especially a cardiotoxic effect such as myocarditis, arrhythmias,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Predicting a toxic effect of a compound by obtaining a gene expression profile of a tissue or cell sample exposed to the compound and comparing the gene expression profile to a database comprising all of the data given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2004-561893/54.

The gene switch is useful CC for externally regulating the target gene expression. This method is CC useful for selectively controlling peets in the fields, in gene therapy CC and to produce transgenic plants like melons, mangoes and soybean. It can be used to switch on genes which produce lethal proteins, that can be CC employed in the treatment of cancer. The present sequence is the Pseudomonas aeruginosa response regulator protein, lask encoding DNA. CC CLASK is a positive transcriptional activator, that responds to signals from the LasI inducer gene, that directs the synthesis of autoinducer, N-CC (3-oxododecanoly)-L-homoserine lactone (OdDHL)

                                                                      ABD33090 standard;
                                                                                                                                                                                                                                                                                                                                                             including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics,

Morris DW, Malandro MS,

Novel human cancer associated protein encoded within open reading cancer associated gene, useful as targets for diagnosing cancer.

Disclosure; SEQ ID NO 33; 182pp; English.

FXSX

inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate and monitoring the effect of the articancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bloactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a murine CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a

CC expression of genes in a first filamentous fungal cells. The method CC same genes in one or more second filamentous fungal cells. The method CC involves differentially labeling nucleic acids from the first and second CC involves differentially labeling nucleic acids from the first and second CC fungal cells with filuorescent reporter dyes, and adding the mixture of CC fluorescently labeled polynucleotides to a substrate containing an array CC fluorescently labeled polynucleotides to a substrate containing an array CC fluorescently labeled polynucleotides to a substrate containing an array CC fluorescently labeled polynucleotides to a substrate containing an array CC fluorescently labeled polynucleotides to a substrate containing an array CC fluorescently labeled polynucleotides to a substrate containing an array CC fluorescently labeled nucleic acids set and by fluorescence; CC expression of genes in the fungal cells is determined by fluorescence; CC entitted when labeled nucleic acids from the second fungal cell hybridise. CC cells used in the method are chosen from Acremonium, Aspergillus, CC cells used in the method are chosen from Acremonium, Aspergillus, CC cells used in the method are chosen from Acremonium, Aspergillus, CC reported from Filamentous fungal cells, in order to improve the cells, protein CC invention is useful for monitoring the expression of a plurality of genes of filamentous fungal cells, in order to improve the cells, protein CC strain ATCC 20334) which is specifically claimed for use in the method of the printed specification, but was obtained in electronic format CC serials ausnto. GOV secuence human off compart off cells at a specifical secuence format collars. The production compart to file at the filamentous fungal cells, but was such organisms are used for the industrial collars.

(M1) is useful for monitoring global expression of several genes from a filamentous fungal cell, discovering new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. In (M1), one spot on an array equals one gene or open reading frame, extensive follow-up characterization is unnecessary since sequence information is available and EST microarrays can be organized based on sequence of the invention. (Note: this sequence corresponds to an EST sequence of the invention but can be obtained in electronic form from the lighton web site sequence but the lighton web site sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SXEXEX
                                    Matches
                                                                 Query Match
                                                                                                                                       plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                             polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as

The invention relates to recombinant carcinoma associated (CA) nucleic combinant carcinoma associated proteins (CAP) encoded by them. The CC recombinant carcinoma associated proteins (CAP) encoded by them. The CC invention also encompasses expression vectors and host cells comprising a CC invention also encompasses expression vectors and host cells comprising a CC invention were identified using CC interest to the protein, and a biochip comprising CA mucleic acid or CC patched in the rect. The sequences of the invention were identified using concegnic retroviruses, which insert into the genome of the host organism CC arrandom. Many of these do not carry transduced host oncogenes or CC at random. Many of these do not carry transduced host oncogenes or CC direct consequence of the effects of proviral integration into host pathogenic trans-acting viral genes, meaning that cancer incidence is a protooncogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, prostate cancer, lymphoma or CC leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodies are also useful as tissues. CA nucleic acids, proteins and antibodies are also useful as the sequence of the invention. Note: The complete sequence CA nucleic acid present sequence represents a specifically claimed murine CA nucleic acid sequence of the invention. Note: The complete sequence data for this sequence of the printed specification, but was obtained cft. The electronic format directly from WIPO at CC in electronic format directly from WIPO at

This invention relates to a novel recombinant carcinoma-associated (CA) compulsive acid comprising a fully defined genomic, mRNA or coding sequences of mouse Rorc gene or human RORC gene, mouse EQ15938 or human gene BAT1, compuse Tggapl gene or human IQGAP1 gene, mouse EQ15938 or human gene BAT1, compuse Tggapl gene or human IQGAP1 gene, mouse EQ15938 or human gene BAT1, compuse Iggapl gene or human KCNU9 gene, mouse Ppp3cc gene or human KCNU9 gene, mouse Ppp3cc gene or human EQ27579 gene, as given in the specification. CA genes are genes which are preferably expressed in CC cancer cells, preferably lymphatic, breast, prostate or epithelial cells. CC carcinoma-associated proteins (CAP) may have cytostatic activity and the carcinoma-associated proteins (CAP) may have cytostatic activity and the carcinoma-associated proteins (CAP) may have cytostatic activity and the carcinoma-associated proteins (CAP) may have cytostatic activity and the carcinoma-associated proteins the use of gene therapy or a seful for diagnosis and treatment of carcinomas, especially lymphoma carcinoma, breast cancer and prostate cancer. The CA genes may also be carcinoma, breast cancer and prostate cancer. The CA genes may also be considered to the mouse Rorc gene genomic DNA sequence of the invention.

A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.

The invention relates to recombinant carcinoma associated (CA) acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them

nucleic

The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic

gene therapy,

ဝူ

New recombinant nucleic acid,

The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, prostate cancer, lymphoma or leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acide, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed murine CA nucleic acid semience of the invention. Note: The complete sequence data for this

                                                                                                                                                                                                                                                                         nucleotide sequence selected from any of the fully defined carcinoma-
associated (CA) genes from the 50 tables given in the specification. The
CA proteins are secreted, transmembrane or intracellular proteins. The
recombinant nucleic acids are useful for screening for drug candidates
for diagnosing or treating carcinomas. Sequences given in ADC85215-
ADC85514 represent CA genes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mus sp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; gene therapy; vaccine; cancer; carcinoma-associated gene; secreted; transmembrane; intracellular; ds.

CC also relates to a host cell comprising a recombinant nucleic acids. The invention compression vector, an expression vector comprising a recombinant nucleic acid or carcinoma associated protein, a method of screening for drug candidates, a cc carcinoma associated protein (CAP) encoded by a nucleotide sequence, a cc carcinoma associated protein (CAP) encoded by a nucleotide sequence, a cc carcinoma drug, a method of diagnosing carcinoma, a method of carcinoma, a method of carcinoma, a method of evaluating the effect of a candidate cc carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting the estivity of a CAP, a method of evaluating the effect of a candidate cc carcinoma drug, a method of evaluating the drug to a patient, removing a cell sample from the patient and determining alterations in the cappression or activation of a gene comprising the nucleotide sequence. A cc expression or activation of a gene comprises determining the expression of a second normal tissue type from the first individual and comparing the expression indicates that the first individual and comparing the expression indicates that the first individual and comparing the expression indicates that the first individual and comparing the expression indicates that the first individual and comparing the expression indicates that the first individual and comparing the expression indicates carcinoma. A method of inhibiting the cappression of the gene from the CAP. The CAP. Treating carcinoma a patient an inhibitor of CAP. Comparises administering to a patient an inhibitor of CAP. Comparises administering to a patient an inhibitor of CAP. Treating carcinoma comprises an antibody that specifically binds to the protein encoded by the nucleic acid. The nucleic acids are useful for preparing a composition for diagnosing or treating carcinoma e.g., comparing a patient and carcinoma e.g., comparing a composition for diagnosing or treating carcinoma e.g., comparing a composition of the protein encoded by the comparing carcinoma carcin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mus musculus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cytostatic.

                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABL1675) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the
Drosophila melanogaster expressed polynucleotide SEQ ID NO 24191.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4989 BP; 1258 A; 1059 C; 1140 G; 1532 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mouse cancer associated sequence MD10-012, SEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-OCT-2004 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADQ97596 standard; DNA; 90616 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytostatic; Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ADQ97596;
                                                                                                                                                      The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                           New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or treating cancers such as leukemia and lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-DEC-2002; 2002US-00330773

The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomas. Sequences given in ADC85215-
                                              Mus sp.

                                                                                                                                                                                                                                                                                                                                 RESULT 31
                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to recombinant carcinoma associated (CA) nucleic CC acid sequences from mouse and human (AAAA01482-AAA03094), and to CC recombinant carcinoma associated proteins (CAP) encoded by them. The CC invention also encompasses expression vectors and host cells comprising a CCA nucleic acid, a polypeptide (especially an antibody) that specifically CC binds to the protein, and a biochip comprising CA nucleic acid or CC fragments thereof. The sequences of the invention were identified using CC oncogenic retroviruses, which insert into the genome of the host organism CC at random. Many of these do not carry transduced host oncogenes or CC pathogenic trans-acting viral genes, meaning that cancer incidence is a CC direct consequence of the effects of proviral integration into host CC protoconcogenes. The CA nucleic acid sequences can be used to diagnose CC carcinoma (especially breast cancer, prostate cancer, lymphoma or CC leukaemia) or a propensity to carcinoma by determination of the sequence CC issues. CA nucleic acids, proteins and antibodies are also useful as CC therapeutic agents and in screening and evaluating drug candidates. The present sequence of the invention. Note: The complete sequence CA nucleic acid consequence of the invention. Note: The complete sequence can and on this description but was obtained consequence of the invention. Note: The complete sequence has not a brained consequence of the invention. Note: The complete sequence was obtained.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          XXXXX
                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
ADB72557 standard;
                                                                                                                                                                                                                                                                                                                              Sequence 96600 BP; 27391 A; 19001 C; 20558 G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant nucleic acid encoding carcinoma associated protein, useful for preparing compositions for treating carcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-587068/55.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polymucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2003-239337/23

The invention relates to new recombinant

nucleic acids. The invention

Neubauer A,

```
cc expression vector, an expression vector comprising a recombinant nucleic acid, a recombinant protein, a method of screening for a bloactive agent capable of binding to a carcinoma associated protein (CAP) encoded by a nuclectide sequence, a cc carcinoma associated protein (CAP) a nectoded by a nuclectide sequence, a activity of a CAP, a method of evaluating the effect of a candidate carcinoma drug, a method of diagnosing carcinoma, a method of carcinoma, a method of treating carcinoma, a method of treating carcinoma, a method of carcinoma or neutralising the effect of a CAP and a method of diagnosing carcinoma or cerivation of a gene comprise to a patient, removing a ccell sample from the patient and determining alterations in the carcinoma or activation of a gene comprise determining the expression or activation of a gene comprise determining the expression of the genes comprises the nucleic acid sequence in a first tissue type from the first individual and comparing the expression of the gene from a second normal tissue type from the first individual or a second a second normal tissue type from the first individual or a second carcinomas comprises binding an inhibitor to the CAP. The polypeptide specifically binds to the protein encoded by the nucleic acid. The nucleic acid are useful for preparing a composition for diagnosing or treating carcinoma e.g., the nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specifically binds to the case of the case of the case of the comprises an antibody that specifically binds to the composition for diagnosing or treating cacids are useful for preparing a composition for diagnosing or treating cacids are useful for confident a useful of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 33

Claim 18; Page; 156pp; English.

New recombinant equine herpes and where protein gM has been or preventing EHV infections.

(EHV) virus free of heterologous elements, deleted, useful as a vaccine for treating

Herpes Virus (EHV) where

WPI;

2004-440311/41.

The invention describes a new recombinant Equine Herpes Virus (EHV) when the protein gM is absent, and the EHV is free of heterologous elements. Also described are: a nucleic acid coding for an EHV defined above; a vaccine preparation comprising the EHV or nucleic acid; obtaining a recombinant EHV; and a cell line for use in the method, where the gene encoding the protein gM is transfected into the cell line, and the cell line expresses gM. The vaccine comprising the EHV or nucleic acid encoding EHV is useful for treating and/or preventing EHV-associated condition, and for monitoring the therapeutic success. The recombinant EHV is useful as a vaccine against EHV infections. This sequence represents an Equine herpesvirus 4 genome in which nucleotides 92681-

(EHV) where

The invention describes a new recombinant Equine Herpes Virus (EHV) where the protein gM is absent, and the EHV is free of heterologous elements. Also described are: a nucleic acid coding for an EHV defined above; a vaccine preparation comprising the EHV or nucleic acid; obtaining a recombinant EHV; and a cell line for use in the method, where the gene encoding the protein gM is transfected into the cell line, and the cell line expresses gM. The vaccine comprising the EHV or nucleic acid encoding EHV is useful for treating and/or preventing EHV-associated condition, and for monitoring the therapeutic success. The recombinant EHV is useful as a vaccine against EHV infections. This sequence represents an Equine herpesvirus 4 genome in which nucleotides 92681-92731 and 93765-93865, comprising regions of the gM gene, have been deleted.

                                                                                                                                                                                                                                                                 The invention describes a new recombinant Equine Herpes Virus (EHV) where the protein gM is absent, and the EHV is free of heterologous elements. Also described are: a nucleic acid coding for an EHV defined above; a vaccine preparation comprising the EHV or nucleic acid; obtaining a recombinant EHV; and a cell line for use in the method, where the gene encoding the protein gM is transfected into the cell line, and the cell line expresses gM. The vaccine comprising the EHV or nucleic acid encoding EHV is useful for treating and/or preventing EHV-associated condition, and for monitoring the therapeutic success. The recombinant EHV is useful as a vaccine against EHV infections. This sequence represents the Equine herpesvirus 4 genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Equine herpesvirus 4.

                                                                                                                                                                                                                                                                                                                                                                                           cc associated (CA) nucleic acid, comprising two or more nucleic acid probes.

Ct isolated polypeptides encoded by a CA nucleic acid sequence, a compound ct that binds to a polypeptide, an isolated antibody or its fragment which co binds to a polypeptide, which is prepared by immunizing a host animal cc binds to a polypeptide, which is prepared by immunizing a host animal co mitted antibody and a compound ct the antigen or its antigen binding fragment, a composition comprising the polypeptide or its antigen binding cannot be expressing antibodies against the antibody and a carrier, a method of greening for anticancer activity, a method of detecting a CA nucleic acid, a method of diagnosing cancer, a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA complete acids. The antibody is useful for detecting the presence of cancer cells in an individual which involves contacting cells from the individual with the antibody, where the detection of the complex correlates with the presence of cancer cells in an individual. The composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA cancer, for treating cancer and for inhibiting expression of a CA gene in a cancer, for treating cancer and for inhibiting expression of a CA cancer, for treating cancer and for inhibiting expression of a CA gene in cancer, for treating cancer and for inhibiting expression of a CA gene in cancer, for treating cancer and for inhibiting expression of a CA gene in cancer, for treating cancer and for inhibiting expression of a CA gene in cancer, for treating cancer and for inhibiting expression of a CA gene in cancer, for treating cancer and for inhibiting expression of a CA gene in cancer.

                                                                                                                                                                                                                                                                                                                                                             bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial trugets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD01397-ABD17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
      Bacterial infection; gene; ds; Pseudomonas aeruginosa infection,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastasized in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (ii) is also useful as a pharmacodyanamic or pharmacogenomic marker; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2001-662795/76.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Schlegel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences, (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC supplement protein expression or biological activity. The
CC involving aberrant protein expression or biological activity. The
CC involving aberrant protein expression or biological activity. The
CC diagnostics forensics, gene mapping, identification of mutations
CC conditions for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtaine electronic format directly from WIPO at
New isolated nucleic agenes from Drosophila interactions.

                                        The present invention relates to a method for identifying a modulator of quorum sensing signalling in bacteria. The method comprises: providing a cell that comprises a quorum sensing controlled gene (ADS14446-ADS14798), where the cell is responsive to a quorum sensing signal molecule such that a detectable signal is generated; contacting the cell with a quorum sensing signal molecule in the presence and absence of a test compound; and detecting a change in the detectable signal. The method and modulator identified by the method are useful for treating a biofilm-associated disease or disorder, e.g. cystic fibrosis, ADIS, middle ear infections, acne, periodontal disease, catheter-associated infections, and medical device-associated infections. Note: The sequence data for this patent was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytostatic; Anti-HIV; Antimicrobial; quorum sensing signalling; bacterium; biofilm-associated disease; cystic fil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLG1818-6-ABL30511) expressed DNA sequences (ABLG1818-6-ABL30511).
                                                                                                                                                                                                                                                                                                       Identifying a modulator of quorum sensing signaling in bacteria, for treating a biofilm-associated disorder, comprises contacting with a quorum sensing signal molecule in the presence and absence.
                                                                                                                                                                                                                                                                                                                                                                                                      Greenberg EP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABB72072). The sequence data for this patent did not form part printed specification, but was obtained in electronic format difrom WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                           Disclosure;
                                                                                                                                                                                                                                                                                          with a quorum sensing test compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-MAR-2003; 2003US-00389647
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-MAR-2004; 2004WO-US007467
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        30-SEP-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO2004083385-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pseudomonas aeruginosa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pseudomonas

밁
                                                                                                                                        The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnosis and the therapy of pathological conditions, as molecular targets for diagnostics, compoundly laxis and treatment of pathological conditions resulting from a CC bacterial infection, for evaluating a compound, such as a polypeptide, CC offective antibacterial targets, as targets for antibacterial drugs, cC including anti-P. aeruginosa drugs, as templates for recombinant CC components for diagnosis and/or treatment of P. aeruginosa-caused CC components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD01397-CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed CC specification but was obtained in electronic format from USPTO at CC sequences auspho.gov/sequence.html

                                                                                                                                                                                                                                                                                                                        cc dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, cc and mouse embryonic skin, keratinocytes and neonatal foreskin fibroblasts, cells. Polypeptides of the invention may be used to treat inflammation, cc cells. Polypeptides of the invention may be used to treat inflammation, cc cancer and neurological diseases. The proteins may be used to stimulate ct the growth and motility of keratinocytes, to inhibit the growth of cancer cc cells, to modulate angiogenesis and tumour vascularisation, to modulate cc skin inflammation, to modulate epithelial cell growth and to inhibit combination of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle cc growth and developmental defects, skin wounds and hair follicle cc from several mouse, rat or human skin cell types. Sequences AAZ61606-Z61832 represent cDNA sequences AAZ61606-Z61832 represent cDNA sequences AAZ61606-CC with an N-terminal signal sequence, indicating that the proteins are secreted. Sequences AAZ61607-Z61868, AAZ61766-Z61780, AAZ61812-Z61817 and AAZ61827-Z61829 encode proteins with one or more putative transmembrane cc domains

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD01397-ABB17967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2003-615309/58.

The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Following this first strand reaction, double-stranded CDNA was blunted, ligated to NotI adapters, digested with EcoRI, size-selected, and cloned into the NotI and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-923 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Organ: brain; Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: Not1; This normalized library was constructed from 1 million independent clones. cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction.

Marine viruses were isolated from 200 liters of Surface seawater using a combination of differential filtration and density-dependent gradient centrifugation. Linker amplified shotgun libraries were constructed by randomly shearing the total marine viral community DNA, end-repairing, ligating dSDNA linkers to the ends, and amplifying the fragments using Vent DNA polymerase. The resulting fragments were ligated into the pSMART vector and electroporated into MC12 cells (Lucigen; Middleton, WI)."
